

The benefits of

VIRTUALISATION

Desktop | Server | Backup

Resource optimisation

Virtualisation enables businesses to consolidate multiple physical servers, desktops, and applications into virtual instances, maximising resource utilisation and reducing hardware costs.

Scalability

Virtualisation allows businesses to scale their IT infrastructure up or down quickly and easily, enabling them to adapt to changing business requirements and accommodate growth without the need for costly hardware investments.

Flexibility & agility

With virtualisation, businesses can create virtual environments that are decoupled from physical hardware, enabling greater flexibility and agility in deploying and managing IT resources.

Disaster recovery & continuity

Virtualisation facilitates the implementation of robust disaster recovery and business continuity solutions, enabling businesses to replicate and recover virtualised workloads rapidly in the event of a disaster or outage.

Cost saving

By reducing the need for physical hardware, virtualisation can lead to significant cost savings in terms of hardware procurement, maintenance, energy consumption, and data centre space.

If you require assistance with virtualisation, please contact ABM Computer Solutions. We can offer our wealth of business IT knowledge to assist you with a tailored solution.
